Battery Cable With Provisions For Integral Circuit Protection

This device provides the primary truck battery cable with a provision to supply protected B+ and Ground to the truck electrical system. The protection device as shown in the drawings is a Mega-Fuse but the design should not be limited to the Mega-Fuse since a circuit breaker or other fuse system would also be acceptable.

The device provides a battery cable with a unique battery terminal lug that includes a threaded stud on the parent terminal material or an additional independent terminal attached to the battery cable with a threaded stud supplying battery power or ground to the protection device. The device provides clean battery power and ground to the protection device without the need for supplemental interconnect cables thus eliminating unwanted voltage drop and eliminating the added cost of the interconnect cable.
